Descriptions

RF MISO's Model RM-CPHA2232-18 is RHCP or LHCP circularly polarized horn antenna that operates from 22 to 32 GHz. The antenna offers a typical gain of 18 dB and low VSWR 1.5 Typ. The antenna is equipped with a circular polarizer, a circular wave-guide to circular wave-guide Converter and a conical horn antenna. The gain of the antenna is uniform in the entire frequency band, the pattern is symmetrical, and the working efficiency is high. Antennas are widely used in antenna far-field testing, radio frequency radiation testing and other scenarios.
